Multi Pro

Micro Pro

Multi Pro CNC Router

Multi Panel 50

Multi Panel 60

Multi Pro Fire Door

Mikron Pro

Multi Pro Rosette

The **Multi Pro** series of tools are designed with maximum flexibility in mind. Designed for use on a variety of machines, multiple profile tooling is economical, powerful, and suitable for large or small production runs.

The Minimal cost of new tooling profiles will more than pay for the initial start up

cost of the **Multi Pro** line of tools.

Please explore the **Multi Pro** family to see how these tools can benefit your company, and be sure to revisit our site periodically, because our engineers are always coming up with more multi pro tooling ideas and applications.

**The Multi Pro, our most popular insert tool, is available in a variety of widths to accommodate any profile you need. Here are some of the benefits of the Multi Pro:**

- By simply changing inserts when dull, there is no need to send the tool in for sharpening
- Tool Bodies are machined using wire EDMs, resulting in a higher concentricity, leading to a superior surface finish
- Hardened backer plates are 5/16" thick with integrated safety slots, making them the strongest in the industry
- Inserts are made of high quality tungsten carbide (sub micro grain). They are precision ground, and have integrated safety slots
- Guaranteed repeatability, and consistency in your profiles
- Constant small diameter of 125mm (4.921"), resulting in less setup time
- CJ Bridge side locating system makes for more accurate side locating, and allows for a visual of the bottom of the insert on both sides of the tool
- Wedge gibb requires very little torque to tighten, thus leading to superior hold down power
- Lead time is less than that of dedicated tooling for new profiles
- Inserts and backers are interchangeable with Micro Pro, Mikron Pro, and Multi Pro CNC Router Bit
